

# CS 210: Principles of Computer Organization

## Bashcrawl

Welcome! This is a game to teach you the basics of using a POSIX (Linux, BSD, UNIX) terminal. To start playing, find a partner. *It's dangerous to go alone!* Next, decide which of you will operate the computer (type) as you play. Open a terminal in your Linux VM and make the text much larger so both of you can clearly see (**ctrl shift +** to make bigger, **ctrl -** to make smaller).

1. Navigate to your Documents directory by typing the following: `cd Documents`
2. Clone the repository: `git clone https://gitlab.com/slackermedia/bashcrawl.git`
3. Navigate to the entrance: `cd bashcrawl/entrance`
4. Your first move is very important. Type this into your terminal: `cat scroll`

You are now playing the game. May the gods save you.

Bashcrawl-specific cheat-sheet (to help you win!): fill in which commands accomplish the given tasks

- Show current inventory
- Add to inventory
- Show current health

POSIX cheat-sheet: write what the following commands do as you learn them

- `cd`
- `cat`
- `ls [-F]`
- `export`
- `echo`
- `pwd`
- `alias`
- `ln -fs`
- `find <path> -name <text>`
